Interview Questions & Answers

40 Practical Questions for a Fresher

Prepared for: Pratham Salian

AIML Graduate / Fresher • HR + Self Introduction + Company + Project + Situational Questions

How to use this PDF: Do not memorize every sentence word-for-word. Understand the meaning, then answer naturally in your own words. Keep most answers around 30–60 seconds unless the interviewer asks for more detail.

Interview rule: Be honest. If you do not know something, say so professionally and explain what you do know.

1. Self Introduction & Personal Questions

1. Tell me about yourself.

Suggested answer: Good morning. My name is Pratham Salian. I have a background in Artificial Intelligence and Machine Learning, and I have been developing my technical skills in areas such as Java, SQL, Python, Excel, and automation testing. I enjoy learning new technologies and solving practical problems. As a fresher, I am looking for an opportunity where I can apply what I have learned, gain real industry experience, and continuously improve my technical and professional skills.

2. Walk me through your resume.

Suggested answer: My resume mainly represents my education, technical skills, projects, and the technologies I have been learning. My academic background is in AIML, and alongside my studies I have worked on improving programming, SQL, data-related, and automation skills. I am particularly interested in roles where I can learn through real projects and gradually take more responsibility.

3. What are your strengths?

Suggested answer: My main strengths are that I am a quick learner, I am willing to put consistent effort into improving, and I try to understand concepts practically rather than only memorizing them. I also take feedback seriously and use it to improve my work.

4. What is your biggest weakness?

Suggested answer: Sometimes I spend more time than necessary trying to make my work perfect. I am improving this by setting priorities, managing my time better, and focusing first on completing the important part correctly before spending additional time on improvements.

5. Why should we hire you?

Suggested answer: As a fresher, I understand that I still have a lot to learn. However, I have a technical foundation, a willingness to learn, and the flexibility to adapt to the company's tools and processes. If given the opportunity, I will focus on learning quickly, completing my responsibilities properly, and becoming productive for the team.

6. Where do you see yourself in five years?

Suggested answer: In five years, I want to be a strong technical professional with solid industry experience and deeper expertise in my field. I would like to take ownership of projects, solve more complex problems, and contribute meaningfully to my team and organization.

7. What motivates you?

Suggested answer: Learning and improvement motivate me. I like the feeling of understanding something that was difficult earlier and then applying it to a practical problem. Progress in my technical skills and seeing useful results from my work are strong motivators for me.

8. What are your hobbies or interests?

Suggested answer: I like learning about technology and experimenting with new tools. I also enjoy entertainment such as anime and spending time on creative or digital projects. I try to balance learning with activities that help me relax.

2. Education, Career & Fresher Questions

9. Why did you choose AIML?

Suggested answer: I chose AIML because I was interested in technology, programming, data, and how intelligent systems solve problems. The field also gave me exposure to different areas such as programming, machine learning, and data processing.

10. Why are you looking for a job now?

Suggested answer: I want to move from academic learning to practical industry experience. I believe working on real projects will help me understand professional development, teamwork, deadlines, and business requirements much better than learning only through coursework.

11. You are a fresher. Do you have enough practical knowledge?

Suggested answer: I have a foundation in the required concepts and I have been practicing them through projects and hands-on learning. I also understand that industry work is different from academic learning, so I am prepared to learn the company's processes and tools quickly.

12. Why did you apply for this role?

Suggested answer: The role matches the technical skills I have been developing and gives me an opportunity to apply them in a professional environment. I am also interested in learning how these technologies are used to solve real business problems.

13. Are you willing to learn a technology that you have never used?

Suggested answer: Yes. I am comfortable learning new technologies based on project requirements. My approach is to first understand the purpose of the technology, then learn the fundamentals, practice with small examples, and finally apply it to a real task.

14. Are you comfortable working in a team?

Suggested answer: Yes. I believe good teamwork requires communication, responsibility, and respect for other people's ideas. I am comfortable handling my own tasks while also discussing problems and collaborating with team members when needed.

15. Are you comfortable working from the office?

Suggested answer: Yes. I am open to working from the office and adapting to the company's working model. I understand that being physically present can also make communication and learning easier, especially at the beginning of a career.

3. Company & Role Questions

16. What do you know about our company?

Suggested answer: From my research, I understand that your company works in [industry/domain] and provides [main products/services]. I also looked at [specific product, service, project, or recent development]. What interested me is the opportunity to work in this environment and develop skills relevant to this role.

17. Why do you want to join our company?

Suggested answer: I want to join because the role provides an opportunity to work on real-world problems and learn in a professional environment. I am also interested in the company's work in [specific area], which connects with the skills I am developing.

18. Why this particular job role?

Suggested answer: This role matches the skills I have been building and the kind of work I want to learn more about. It would allow me to use my existing knowledge while also developing practical skills through real projects and responsibilities.

19. What can you contribute to our company as a fresher?

Suggested answer: I can contribute a willingness to learn, a technical foundation, consistent effort, and a fresh perspective. I am also prepared to learn the company's processes and take responsibility for the tasks assigned to me.

20. What are your salary expectations?

Suggested answer: As a fresher, I am open to the company's standard compensation for this role. My immediate priority is getting the right opportunity to learn, gain industry experience, and build a strong career foundation.

21. Are you willing to relocate?

Suggested answer: Yes, I am open to discussing relocation depending on the role and the company's requirements. I would like to understand the location, responsibilities, and working conditions before making a final decision.

22. Why should we choose you over another candidate?

Suggested answer: I would not compare myself directly with other candidates because each person has different strengths. What I can say is that I am serious about learning, I have a relevant technical foundation, and I am ready to put consistent effort into becoming productive in the role.

4. Project & Technical-Experience Questions

23. Tell me about your project.

Suggested answer: My project was focused on [project name/problem]. The main objective was to [objective]. I worked with technologies such as [technologies]. My responsibility was mainly [your contribution]. The project helped me understand how to convert a requirement into a working solution and also taught me how to troubleshoot problems during development.

24. What was your role in the project?

Suggested answer: My main responsibility was [your exact responsibility]. I worked on [specific tasks], tested the results, and fixed issues that came up during development. I also learned how important it is to communicate clearly when working on a project.

25. Why did you choose those technologies?

Suggested answer: I chose them because they were suitable for the requirements of the project. For example, [technology] helped with [purpose], while [technology] was useful for [purpose]. I also considered what would be practical to learn and implement within the project timeline.

26. What was the biggest challenge in your project?

Suggested answer: One of the main challenges was [specific challenge]. I first tried to understand the cause instead of changing things randomly. Then I broke the problem into smaller parts, tested possible solutions, and used documentation or other learning resources where required. This helped me solve the issue and understand the concept better.

27. What did you learn from your project?

Suggested answer: I learned that technical knowledge alone is not enough. A project also requires debugging, testing, time management, documentation, and communication. I also became more comfortable with troubleshooting problems independently.

28. What would you improve in your project if you had more time?

Suggested answer: I would improve areas such as performance, error handling, testing, documentation, and user experience depending on the project. I would also consider adding features based on actual user or business requirements rather than adding features only for the sake of complexity.

29. Did you face any failure or mistake during your project?

Suggested answer: Yes. Like most practical work, I faced issues while developing and testing the project. Instead of treating the mistake only as a problem, I tried to understand why it happened and how to prevent it in the future. That experience improved my debugging and testing approach.

5. Behavioral & Situational Questions

30. How do you handle pressure?

Suggested answer: I first identify what needs to be completed, divide the work into smaller tasks, and prioritize based on urgency and importance. If I face a blocker, I communicate it rather than hiding it. This helps me stay focused instead of becoming overwhelmed.

31. How do you handle criticism?

Suggested answer: I try to take constructive criticism positively. First I listen carefully and understand what needs improvement. If the feedback is valid, I work on it and try not to repeat the same mistake.

32. Tell me about a time you solved a difficult problem.

Suggested answer: During my learning or project work, I have faced problems where the first solution did not work. I handled them by breaking the problem into smaller parts, checking the documentation and examples, testing each possibility, and then implementing the solution. The experience taught me to troubleshoot systematically instead of giving up quickly.

33. What would you do if you were given a task you did not know how to do?

Suggested answer: I would first understand the requirement clearly. Then I would check available documentation, examples, and internal resources and try a small implementation. If I still had a blocker, I would ask a senior or teammate a specific question after doing the initial investigation myself.

34. What would you do if you made a mistake at work?

Suggested answer: I would take responsibility for it, understand its impact, inform the appropriate person if necessary, and work on correcting it. After that, I would identify why the mistake happened and put a process or check in place to reduce the chance of repeating it.

35. How do you prioritize multiple tasks?

Suggested answer: I consider deadlines, business impact, dependencies, and urgency. I complete high-priority and blocking tasks first while keeping track of the remaining work. If two tasks conflict, I communicate with the relevant person rather than making an incorrect assumption.

36. What if you disagree with your team member?

Suggested answer: I would first try to understand their reasoning and explain my perspective with facts or technical evidence. If we still disagree, I would involve the appropriate senior or use the project's requirements and agreed standards to decide the best approach.

37. What if you are given a very short deadline?

Suggested answer: I would clarify the exact expected outcome, identify the essential requirements, and prioritize them. I would communicate early if the deadline creates a genuine risk, rather than waiting until the last moment. My focus would be on delivering the important requirements correctly.

6. Difficult HR Questions

38. What if you don't know the answer to a technical question in this interview?

Suggested answer: I would be honest and say that I do not know the answer rather than guessing. If I know a related concept, I would explain that and show my reasoning. I would also be interested in learning the correct answer afterward.

39. Why are your marks or academic performance not higher?

Suggested answer: My academic performance has not always been consistent, but I have learned from that experience. Over time I have focused more on building practical technical skills and understanding concepts through hands-on practice. I am working on improving both my technical depth and consistency.

40. Do you have any questions for us?

Suggested answer: Yes. I would like to know what the first few months in this role would typically look like, what technologies or tools the team uses most often, and how performance and learning are supported for freshers.

Final Interview Checklist

Before the interview

- ✓ Research the company, its products/services, industry, and the exact job description.
- ✓ Know every line of your resume. Be ready to explain every skill and project you mention.
- ✓ Prepare a 45–60 second self-introduction.
- ✓ Prepare 2–3 projects/examples that demonstrate your skills.
- ✓ Review basic technical concepts relevant to the job.

During the interview

- ✓ Listen to the complete question before answering.
- ✓ Keep your answer direct and structured.
- ✓ Do not pretend to know something you do not know.
- ✓ Use examples whenever possible.
- ✓ Speak calmly and maintain professional body language.
- ✓ If a question is unclear, politely ask the interviewer to clarify it.

Good questions to ask the interviewer

- ✓ What would be the main responsibilities in the first three months?
- ✓ What technologies or tools does the team use most often?
- ✓ How is the onboarding or training process structured for freshers?
- ✓ What does success look like for someone in this role?
- ✓ What kind of projects would I initially work on?

Important: Replace bracketed placeholders such as [company], [project], [technology], and [your contribution] with your actual information before using these answers in an interview.

Practice these answers aloud. The goal is not to sound memorized; the goal is to sound clear, honest, confident, and natural.
